## **Important - Please Read**

Dear Bastrop Water District #2 Customer,

My name is JJ, I am the Customer Service Inspector (CSI) assigned to your account. I need you to contact me so we can discuss this inspection and what you need to have completed in order to comply with State Regulations. Please have your account number or meter number available. This inspection is to protect you and your family from cross-connections (see next page). Be advised, you have already paid this inspection fee.

- Please note: If property is vacant, used for agricultural purposes, residential or commercial, an inspection still needs to be performed.
- Outside faucet **must** have a vacuum breaker or be an anti-siphon faucet, even for temporary and construction use.
- Wells, ponds, lakes, etc. cannot be connected to the public water supply.
- Yard sprinkler systems must have a testable backflow and be tested by a licensed tester and the test paper turned into Water District #2.
- Livestock water trough must have vacuum breaker even if you are using automatic waters.
- This is just a few of the cross connections we will check for. Some, but not all, will apply to each home.
- If you are building a home you can have your builder contact me.

**Please call within 10 days after your meter has been installed, transferred or reconnected.**

**Be aware this is your responsibility to make sure you pass this inspection. There is no reason for anyone to fail the inspection. Failure could result in another inspection fee and/or termination of water service.**

Sincerely,

JJ Jones  
Customer Service Inspector
